

The Creative Class and Subjective Well-Being: Multilevel Analysis

Irina Vartanova, LCSR HSE

iridiva.net@gmail.com

May 16, 2013

Research question

- Does belonging to the creative class make people happier and if it is so why?

Theoretical background

- In 2002 Florida postulated the rise of the creative class as a distinctive feature of postindustrial knowledge societies
- Inspiring, fulfilling, well-paid job
- The lifestyle of the creative class

Previous findings at the macro-level

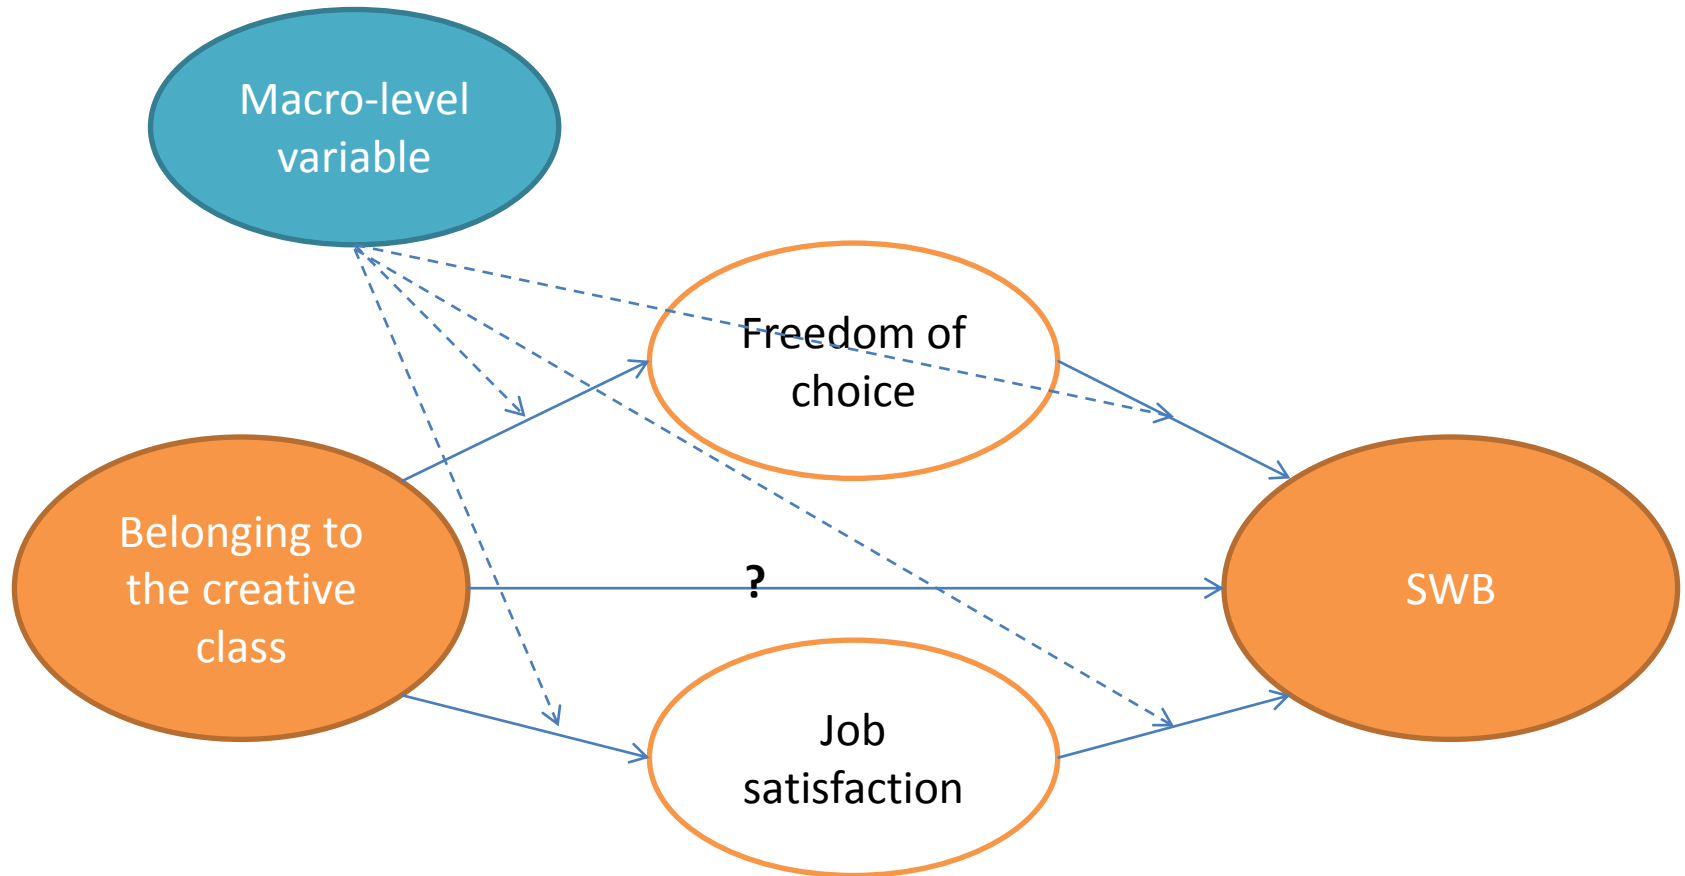

- Mellander et al. (2012)

	Partial correlations controlling for GDP per capita		
	All countries	Low income	High income
Creative class	0.10	-0.31**	0.72***
Service class	0.05	0.33**	-0.57***
Manufacturing class	-0.05	0.15	-0.37*

Theoretical background

- The revised theory of modernization (Inglehart&Welzel, 2005, Welzel, 2013)
- Welzel (2012) has demonstrated that the rise of emancipative values is consistent with such job characteristics as creativity, intellectuality and autonomy.
- Freedom of choice/ Feelings of agency is positively related with SWB (Inglehart et al., 2008, Welzel & Inglehart, 2010)

Model

Hypotheses

- H1. Representatives of creative class are more likely to be happier than representatives of service and manufacturing classes
- H2. Job satisfaction mediates the relationship between belonging to the creative class and SWB
- H2.1 The mediation effect of job satisfaction is expected to be full in less tolerant authoritarian societies with low GDP per capita and industrial economy
- H2.2 The mediation effect of job satisfaction is expected to be partial in tolerant democratic societies with high GDP per capita and knowledge economy
- H3. Freedom of choice partially mediates the relationship between belonging to the creative class and SWB
- H3.1 The mediation effect of freedom of choice will be stronger in tolerant democratic societies with high GDP per capita and knowledge economy

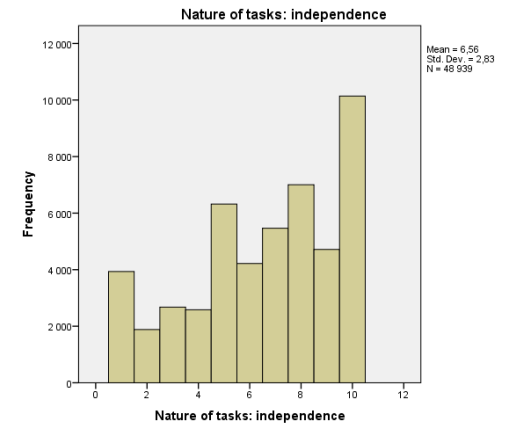

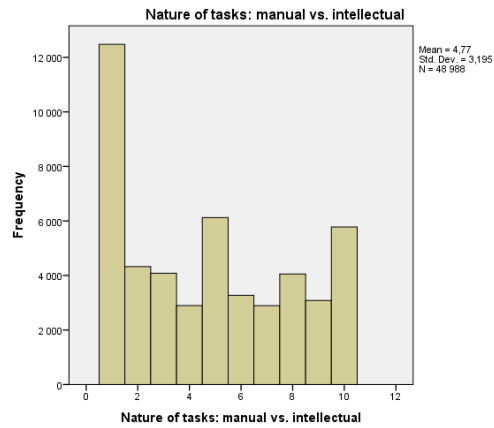

Data base

- WVS, 5th wave

52 countries (Colombia, Guatemala, Iraq, Hong Kong, New Zealand are excluded)

- Are the tasks you do at work mostly manual or mostly intellectual?
- Are the tasks you perform at work mostly routine tasks or mostly creative tasks?
- How much independence do you have in performing your tasks at work?

Distribution

Correlations

	Nature of tasks: routine vs. creative	Nature of tasks: manual vs. intellectual	Nature of tasks: independence
routine vs. creative	1	,446 ^{**}	,246 ^{**}
manual vs. intellectual	,446 ^{**}	1	,159 ^{**}
independence	,246 ^{**}	,159 ^{**}	1

Component matrix

	Component
manual vs. intellectual	,776
routine vs. creative	,822
independence	,556

Extraction Method: Principal Component Analysis

Variables

- Independent variables

Creative (0-1)

Intellectual (0-1)

Independence (0-1)

Creative Class Index (weighted)

- Controls. Education and Income
- Dependent variable. SWB – composed index of two measurements: happiness and life satisfaction (0-1)
