

Factors of Tolerance towards Immigrants in Europe: Self-esteem & Language Diversity

Elena Gaber
Associated Researcher
in LCSR NRU HSE

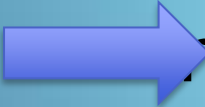

I. Topicality

UN Declaration of Human Rights

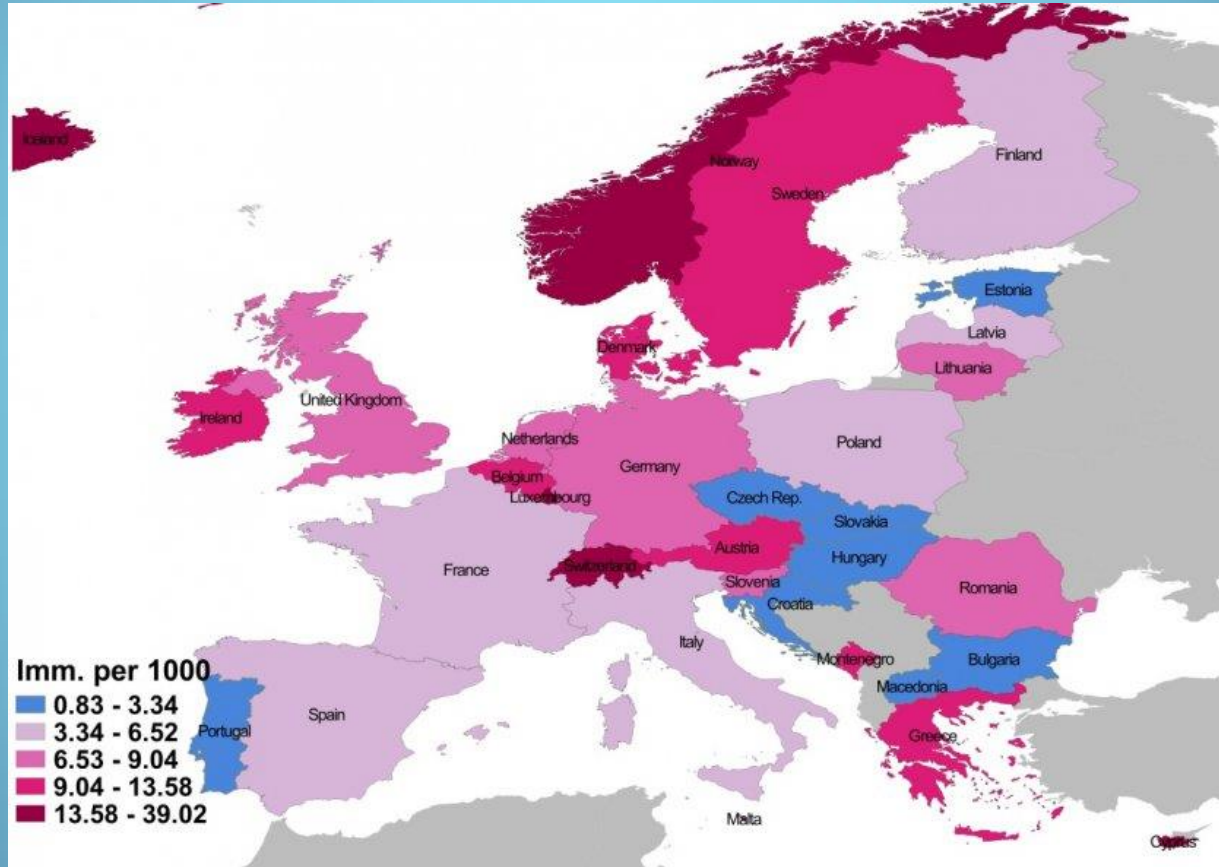

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

I. Topicality

- Tolerance – the acceptance of others who differ from oneself in any way
- Immigration
 -  Increase in diversity
 -  Threat to tolerance

I. Topicality

Immigration to Europe*

*All data in the map is from Eurostat, correct for 2012

I. Topicality

Immigration Dynamics

Norway

UK Net Migration

Research questions

- 1) What kind of association if any exists between self-esteem and tolerance toward immigrants?
- 2) What kind of association if any exists between language diversity and tolerance toward immigrants?
- 3) If there is an interaction effect of language diversity and self esteem on tolerance toward immigrants?

II. Hypotheses

Hypothesis #1, Individual level

- There is a positive association between tolerance and **self-esteem**: a higher level of self-esteem leads to a higher level of tolerance

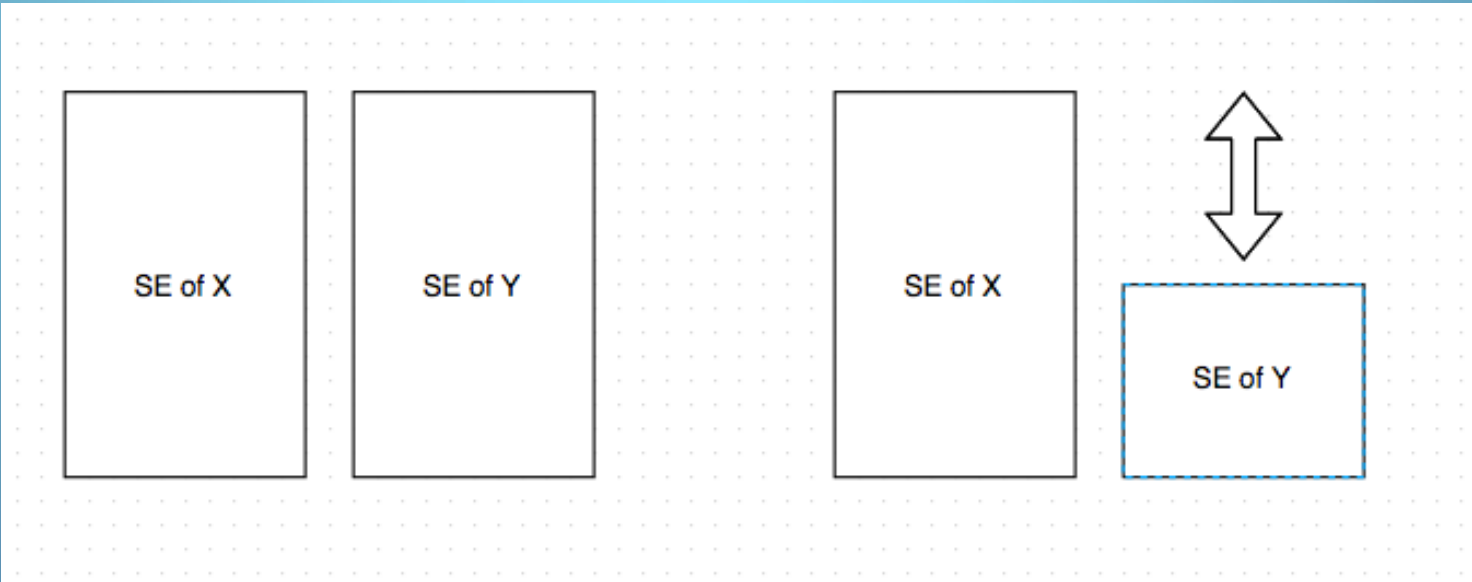

II. Hypotheses

Explanation

- All human beings want to feel good about themselves, and as a consequence they are motivated to increase their level of self-esteem
- Therefore, those with lower SE may increase their SE by lowering their tolerance

II. Hypotheses

II. Hypotheses

Literature

- Tajfel and Turner (1979)

The primary motivations for adopting discriminatory behavior are to enhance *positive distinctiveness* and *self-esteem*

- Brewer (2003)

Individuals who hold strong, dogmatic identities and have low self-esteem are more likely to discriminate against outgroups

BUT:

- a) There is lack of empirical testing of the theory, using statistical methods
- b) In this research we are testing the relation between Global Self-Esteem instead of Role-Specific Self-Esteem

II. Hypotheses

Hypothesis # 2, Society level

- Higher level of language diversity in a given society leads to lower tolerance toward immigrants

II. Hypotheses

Explanation

- There are certain limits to which one group can absorb the people from other groups, while remaining tolerant to their differences
- *David Goodhart The British Dream: Successes and Failures of Post-war Immigration:*

High immigration can undermine national solidarity and be a threat to social democratic ideals of the welfare state.

III. Empirical strategy

Database

- European Social Survey 2012
- 28 countries
- 47396 observations*

* Respondents who weren't born in a given country are excluded from the sample

III. Empirical strategy

Self-Esteem

- In general I feel very positive about myself
- At times I feel as if I am a failure *
- I feel I am free to decide for myself how to live my life
- There are lots of things I feel I am good at

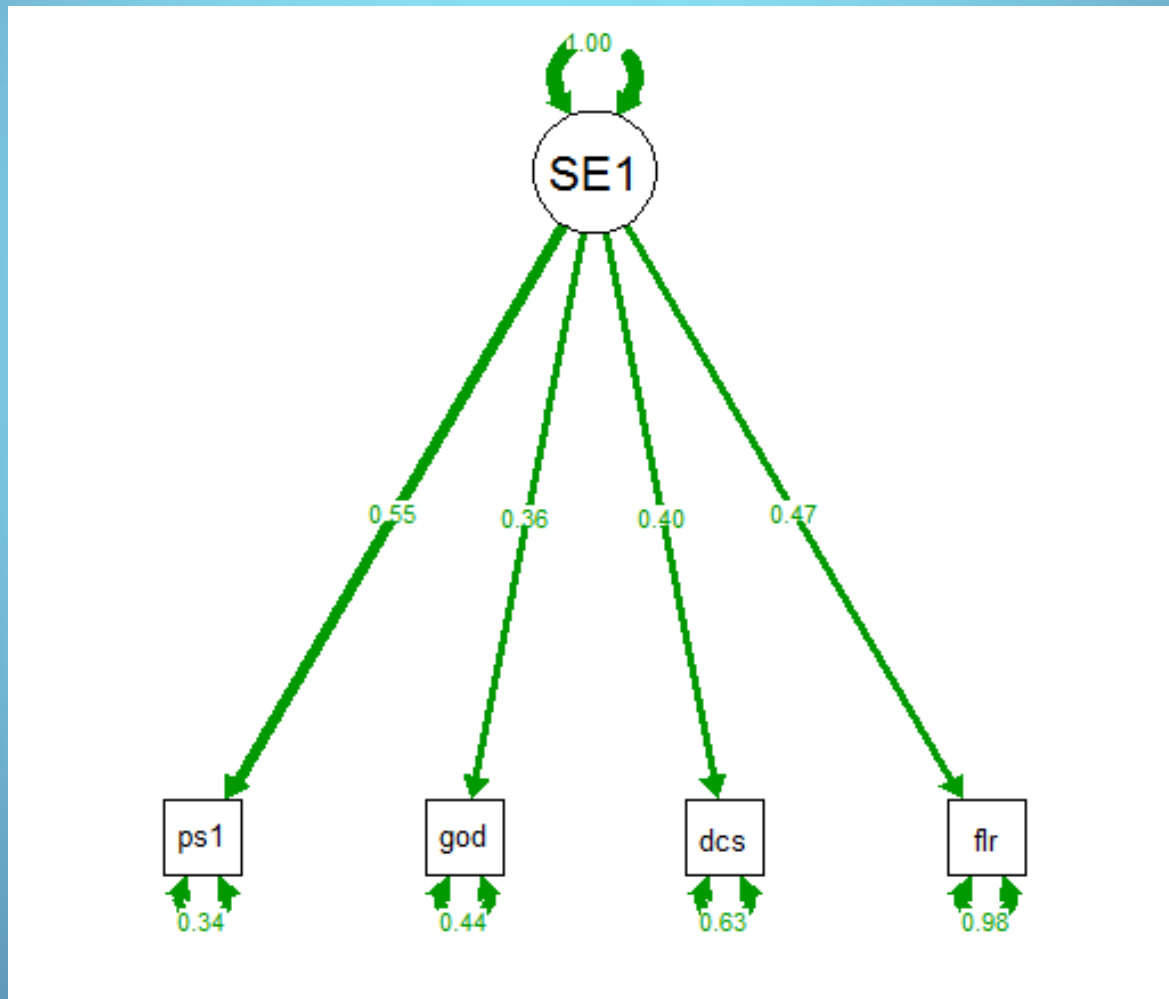

5-points scale,

a higher score represents higher SE

*Reverse scale

III. Empirical strategy

Self-Esteem

III. Empirical strategy

Self-Esteem (SE)

- Fit measures
- Checking for Measurement Invariance

	Model without restrictions	Model with restrictions (equal loadings)	Desirable values
Comparative Fir Index	0,998	0,850	>0.9
RMSE	0,017	0,092	Should be around 0,05, the lower the better
SRMR	0,008	0,06	< 0,08

III. Empirical strategy

Tolerance toward immigrants

- To what extent do you think [country] should allow people of the same race or ethnic group as most [country]'s people to come and live here?
- -"- of the different race?

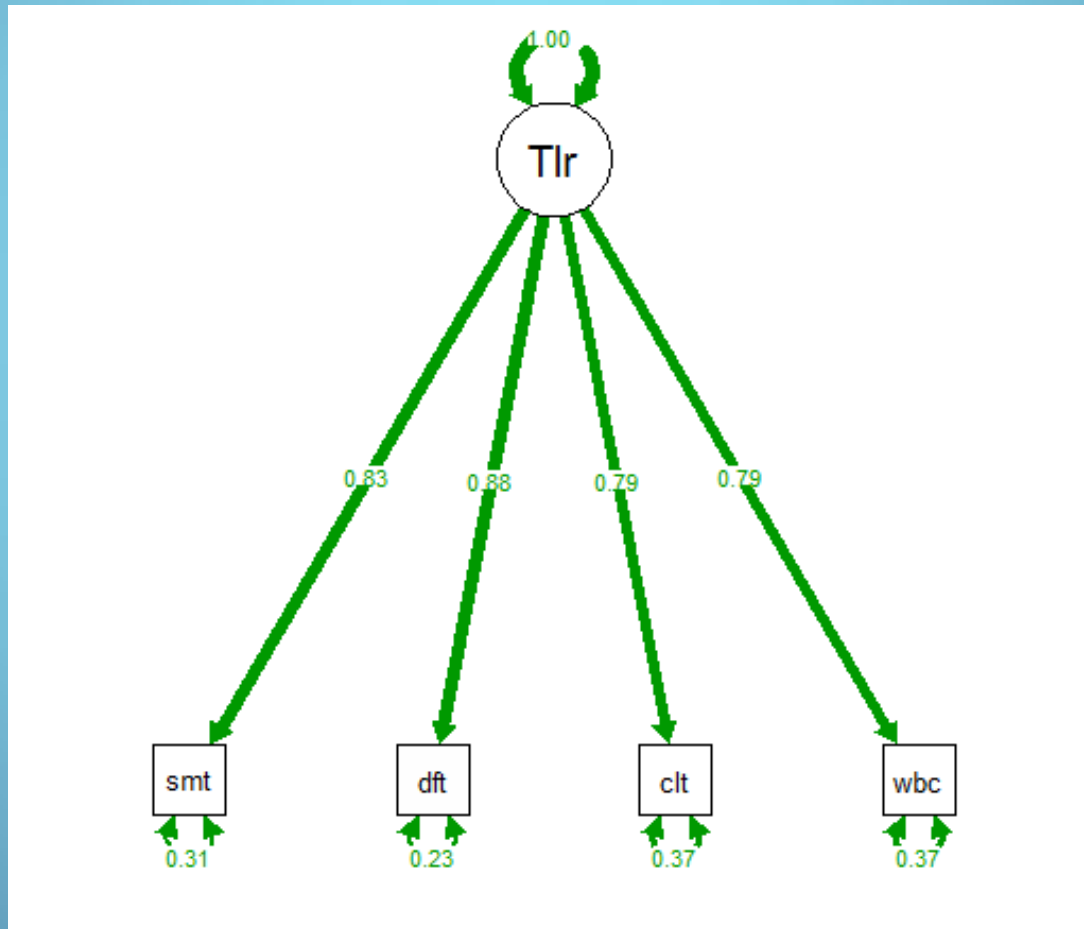

4 points scale, the higher score stays for extent of agreement

- Is [country] made a worse or a better place to live by people coming to live here from other countries?
- Would you say that [country]'s cultural life is generally undermined or enriched by people coming to live here from other countries?

11 points scale, the higher score stays for more positive perception of new comers

III. Empirical strategy

Tolerance toward immigrants

III. Empirical strategy

Tolerance toward immigrants (TTI)

- Fit measures
- Checking for Measurement Invariance

	Model without restrictions	Model with restrictions (equal loadings)	Desirable values
Comparative Fir Index	0,974	0,898	>0.9
RMSE	0,376	0,156	Should be around 0,05, the lower the better
SRMR	0,089	0,113	< 0,08

III. Empirical strategy

Structural Equation Modeling

III. Empirical strategy

Structural Equation Modeling

- Fit measures
- Checking for Measurement Invariance

	Model without restrictions	Model with restrictions (equal loadings)	Desirable values
Comparative Fir Index	0,935	0,859	>0.9
RMSE	0,06	0,08	Should be around 0,05, the lower the better
SRMR	0,04	0,07	< 0,08

III. Empirical strategy

Multilevel Modeling

- **Tolerance toward immigrants = Self-esteem***
+ Level of language diversity + Individualistic
type regime + Age + Education + Feeling of
safety

Country level variable

Control variables

* *Integrated indicator*

III. Empirical strategy

Language Diversity Index

- Greenberg's Index
- Probability that two randomly chosen people speak different language
- ✓ NB Belgium was excluded from the sample

Results

	<i>Dependent variable:</i>					<i>Dependent variable:</i>			
	Culture Enriched		Better country			Same Ethnic		Different Ethnic

Note: *p<0.1; **p<0.05; ***p<0.01

Note: *p<0.1; **p<0.05; ***p<0.01

Results

- There is a significant *positive* association between both *different indicators of TTI and integrated indicator of SE and integrated indicator of it*
- There is a significant *negative* association between *different indicators of TTI and LDI*
- *Interaction effect of SE and LDI* has a significant *negative* association with *different indicators of TTI* : in more multilingual societies a negative effect of SE on TTI is stronger

Results

- All control variables demonstrated significant association with TTI:
 - More educated people tend to be more tolerant
 - Younger people tend to be more tolerant
 - People who feel safe tend to be more tolerant

Policy implications

- Design social policy so as it aspires not just to improve physical conditions of citizens' lives, but also will lead to more healthier psychological environment

(Ex.: Increase and popularization of a number of free psychological consultations centers, hotlines)

- Creating conditions, under which each new comer would be able and obliged to learn local language
(Ex.: Israel example)

What next?

- Improving models
- Especially Tolerance to Immigrants
Measurement

Thank you for your attention!

This report was presented at the 6th LCSR International Workshop
“Trust, Social Capital and Values in a Comparative Perspective”,
which held within the XVII April International Academic Conference on Economic and Social Development.

April 18 – April 22, 2016 - Higher School of Economics, Moscow.

<https://lcsr.hse.ru/en/seminar2016>

Настоящий доклад был представлен на VI международном рабочем семинаре ЛССИ
«Доверие, социальный капитал и ценности в сравнительной перспективе»,
прошедшего в рамках XVII Апрельской международной научной конференции НИУ ВШЭ «Модернизация экономики и общества».

18 – 22 апреля, 2016 – НИУ ВШЭ, Москва.
